

## Base IP Uploader

### Product Overview

The Base IP Uploader is a compact, plug-and-play network device that automatically reports its active public IP address to DNS The World's secure server. It ensures access to cameras, alarm panels, and IoT devices even when the ISP changes the IP address.

### Key Features

- Automatic IP reporting to DNS The World server
- Supports third-party dynamic DNS providers
- Works with DHCP—no static IP required
- Secure outbound-only communication
- Plug-and-play setup, installer friendly

### Technical Specifications

Processor: ESP32-based module

Network: 10/100 Ethernet (RJ-45)

Power Input: 5 VDC via USB, max power 2 W (approx. 0.4 A at 5 V)

Status Indicators: Link/Activity LED and system status LED

### Network Requirements

- DHCP-enabled network
- No inbound port forwarding required

### Environmental

Operating Temperature: 0°C to 50°C (indoor use)

### Warranty & Support

Warranty: 1-year limited hardware warranty

Returns: 30-day return window (customer pays return shipping)

Support: [Support@dnstheworld.com](mailto:Support@dnstheworld.com)
